DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, 23, drawn to a method and apparatus for adjusting fractional amounts of primary colors, classified in class 358, subclass 1.9.
 - II. Claims 16-18, drawn to a method for determining optical characteristics of a substrate to be printed on, classified in class 358, subclass 1.18.
 - III. Claims 19-22, drawn to a color mixing system adapted to printing color documents, classified in class 358, subclass 501.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as means for or step of determining a compensated target transmission spectrum of a printable ink layer, optimizing an uncompensated target transmission spectrum of a printable ink layer, comparing the compensated target transmission spectrum and the uncompensated target transmission spectrum, and selecting fractional amounts of primary colors. Invention II has separate utility such as the step of determining optical characteristic of a desired color, determining optical characteristics of the substrate to be printed on, comparing the optical characteristics of the desired color and the optical characteristics of the substrate to be printed on and adjusting the color components of the desired color to compensate for the optical characteristics of the substrate to be printed on.

Art Unit: 2626

invention III has separate utility such as source of a plurality of primary colorants, at least one optical characteristic source, at least one user interface, a controller connectable to the at least one optical characteristic source and the at least one user interface, wherein the controller controls mixing of a plurality of primary colors from the source of primary colorants in response to the at least one optical characteristic source and the at least one user interface. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Madeleine AV Nguyen whose telephone number is 703 305-4860. The examiner can normally be reached on 9:30-6:00.
